# School World Help Sheet

Adding Content to Your Home Page

Your homepage is the main page for your website. It is the first page that will be displayed when someone visits your site.

From the Main Menu, click on edit Home Page

The edit page has 4 tabs. The first (Page Info) is where you will be working most of the time. The other tabs you will only use if you want to add images, files or links to your page.

Change the navigation and Page title if you want the title of to be something other than what is currently displayed.

Type what you want your page to say in the edit window just as you would in a program like Word.

You can use the tool bar to change the format of your text, add rule lines, or link your text to other web-sites. Moving your mouse over the button will tell you what its function is.

When you are finished, click "Save."
