Removing a Subpage from the Navigation Menu (aka Hiding a page)

To change which subpages are displayed on your website, click on “edit subpages” in the “My Site Content” tab of the main menu.

Place a check in the box of any page you would like displayed on your site.

If there is a check for a page that you no longer wish to display, click the check to remove it.

You may also rearrange pages by changing the numbers in the “Page Order” boxes.

When you are satisfied, click “Update”.
